EDUCATION

University VIZJA

Computer Science

2021–2025

TECHNICAL SKILLS

AI Tools

Claude Code, Cursor, Codex, Agentic AI

Frontend

React, Redux, Zustand, TanStack Query, Tailwind CSS, shadcn/ui

Backend

Node.js, NestJS, Express.js, WebSockets, Socket.IO

Data / Testing

PostgreSQL, MySQL, MongoDB, DynamoDB, Prisma, TypeORM, Drizzle, Jest, Vitest, Playwright

Cloud / Tools

AWS, GCP, Azure, Docker, Nginx, GitHub Actions, Redis, RabbitMQ, BullMQ, SNS, SQS, Stripe

KHANH HOANG TRAN

SENIOR SOFTWARE ENGINEER

Full-Stack Developer with 5 years of experience building web applications. Own features from requirements and technical planning through implementation, testing, code review, and deployment.

PROFESSIONAL EXPERIENCE

Yourflip

Enterpreno.net · Germany / Bulgaria 2025·2026

SaaS platform for coaches and trainers to create presentations and prepare visual materials for printing.

STACK React, NestJS, Node.js, Symfony, PostgreSQL, Python, Gemini API

- Contributed to migrating the backend from PHP/Symfony to NestJS.
- Integrated the Gemini API so users could generate images from text prompts directly in the app.
- Connected a Python-based handwriting tool that turns writing samples into custom fonts.
- Built and improved React features for creating presentations and arranging print layouts.
- Gradually replaced parts of the Twig-based frontend with reusable React components connected to REST APIs.
- Owned image and font generation features from technical planning through implementation and testing.
- Collaborated with the team on feature planning and reviews, using Jira to track tasks, communicate progress, and coordinate delivery.
- Improved frontend performance with a focus on responsive presentation editing and efficient, reusable React components.

hospitalityinside.com

LimeByte GmbH · Germany 2025·2026

Publishing platform and online trade magazine for the international hotel industry.

STACK Next.js, Node.js, TypeScript, Webpack, Docker

- Maintained and improved pages and components in the existing Next.js Pages Router application.
- Upgraded third-party libraries and plugins, adapted integrations, and resolved update-related regressions.
- Took frontend improvements and bug fixes from investigation through implementation and verification.
- Worked with the team to plan improvements, track fixes in Jira, share progress, and demonstrate completed changes.
- Refined frontend performance and page responsiveness, treating optimization as part of ongoing maintenance.

ingacademy.de

LimeByte GmbH · Germany 2025·2026

Continuing education portal offering courses, seminars, and degree programs for engineers.

STACK Next.js, NestJS, TypeScript, Webpack, Docker

- Maintained and improved the frontend of an education portal for engineers.
- Updated existing integrations and fixed compatibility issues following library and plugin upgrades.
- Owned frontend improvements from investigating issues through implementing and verifying changes.
- Collaborated with the team on feature planning, tracked implementation tasks in Jira, and demonstrated completed work.
- Improved frontend performance and responsiveness, with attention to efficient page rendering and component behavior.

Bramberlane CRM

Bramberlane · Germany 2024·2025

B2B CRM for small service businesses to manage customers and access across separate workspaces.

STACK Next.js, NestJS, TypeScript, PostgreSQL, Prisma, Redis, AWS, Socket.IO, Amazon S3

- Built customer forms and lists with search filters and pagination.
- Validated API inputs and checked user permissions within each workspace.
- Implemented live chat in customer records so staff could message customers directly from the CRM.
- Scoped Redis cache keys by workspace ID and tested that customer records remained isolated between workspaces.
- Owned selected CRM features from planning through implementation and testing, coordinating requirements and progress through Jira and regular demos.
- Focused on efficient customer-list loading and responsive search, filtering, and pagination.

Tervelane Scheduling

Tervelane Scheduling · USA 2022·2024

Appointment booking platform for tutors and consultants, with client-facing time-slot selection and provider availability management.

STACK Next.js, NestJS, TypeScript, PostgreSQL, Prisma, AWS

- Designed the Next.js, NestJS, and PostgreSQL architecture and the data model for time slots and bookings.
- Built availability and booking endpoints with input validation and database access through Prisma.
- Implemented the Next.js booking flow, including selecting another slot when the requested time was no longer available.
- Fixed a double-booking bug by reserving the slot and creating the booking in a single database transaction.
- Added integration tests for the booking flow, including concurrent requests for the same slot.
- Set up CI/CD workflows to automate builds and run tests before releases.
- Worked with the team to clarify booking rules and coordinate feature delivery, using Jira to track tasks, issues, and progress.
- Refined booking-flow performance with a focus on responsive availability checks and efficient API and database interactions.
